

Specialized Solutions

Cybersecurity Classified Protection (Level Protection 2.0) Service Solution
Offensive and Defensive Training Solution
Supply Chain Security Service Solution
Zero Trust Security Solution
Red-Blue Team Security Training Service Solution
Data Security Open Solution
Data Security Operations Situational Awareness Platform
Weather Sky Mirror System NGSOC Collaborative Security Solution
Normalized Threat Monitoring and Early Warning Solution

Smart City

Smart City Security Supervision and Operational Response Solution

General Solutions

5G Private Network Security Assessment Service Solution
Security Perception and Management Platform (All-in-One) Solution
Office Network Data Loss Prevention Solution
Phishing Email Specialized Defense Solution
Information System Cryptographic Application Solution
Practical Defense Command Solution for Real Combat Attack and Defense Exercises
Sky Eye MDR Security Managed Service Solution
Privileged Access Security Solution
Network Attack and Defense Exercise Defense Service Solution
Cyberspace Security Situational Awareness and Coordinated Command System Solution
Network Self-Regulation Solution
Website Cloud Monitoring Security Solution
Mobile Security Solution
Cloud Sky Eye Threat Perception Solution
Critical Period Cybersecurity Assurance Service Solution

Industry Solutions

Banking

Banking DNS Security Protection Solution
Banking Security Capability Enhancement Solution
Banking Security Threat Bypass Blocking Solution
Banking Software Supply Chain Security Solution
Banking Privacy Protection Service Solution
Banking Remote Office Solution
Banking Cloud Security Solution
Banking Terminal Security Operations Solution
Banking Terminal Security Integrated Solution

Finance

Financial IT Innovation Terminal Security Solution
Financial Industry Unknown Threat Perception Solution

Healthcare

Hospital Ransomware Specialized Solution

Judicial

Court Industry Security Capability System Construction Solution
Judicial System Visual Security Analysis Platform System Solution

Taxation

Taxation Industry Cybersecurity Compliance Construction Solution
Taxation Data Security Solution

Emergency

Provincial Emergency Command Network Security System Construction Solution

02 Security Products

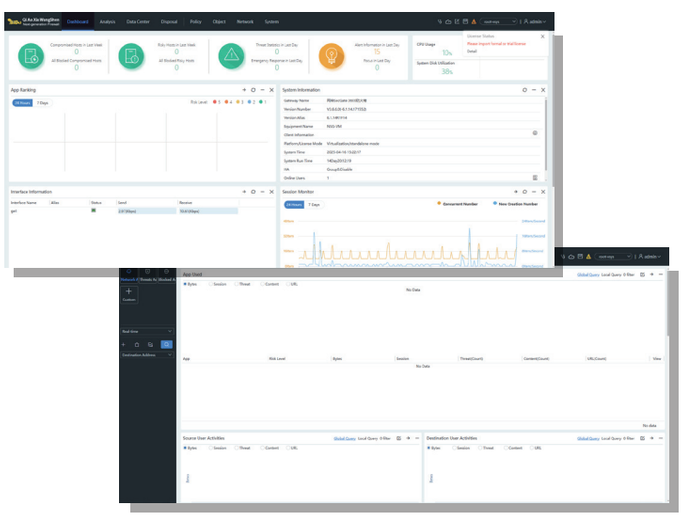

Secure Web Gateway System

A professional enterprise-class web access security proxy product that provides enterprises with comprehensive Internet perimeter protection. The product features intelligent URL filtering, malicious code detection and blocking, fine-grained application control, and Data Loss Prevention (DLP). It effectively identifies and blocks malicious traffic, phishing websites, and malicious software downloads during user web access, while preventing sensitive data from leaking through web channels.

Scope of Application

Applicable to government and public services, financial industry, enterprises, education sector, and healthcare industry.

Firewall System

A new-generation integrated security defense solution designed for government, military, financial, education, carrier and enterprise network egresses. It integrates firewall, VPN, intrusion prevention and antivirus functions. Leveraging the NDR security framework, it enables high-performance threat detection and response. Backed by cloud systems including Tianyan and Tianzhi, it forms a collaborative defense network and offers all-in-one protection from threat analysis and pinpointing to remediation.

Scope of Application

Suitable for government and public utilities, military, the financial industry, enterprises and other sectors.

Internet Behavior Management System

A professional enterprise-grade network control gateway. With comprehensive internet behavior management, it helps enterprises improve work efficiency, ensure network security and optimize bandwidth resources.Tailored for enterprises, government agencies and educational institutions that need to standardize staff internet usage, prevent data leakage and guarantee network performance, it serves as an ideal solution for building an efficient and secure office environment.

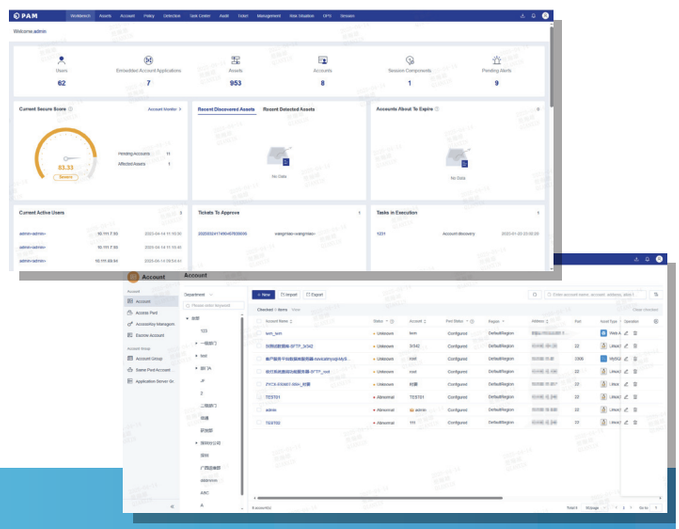

Scope of Application

Suitable for industries including government and public utilities, finance, enterprises, education and healthcare.

Privileged Account Management System

A security solution focused on the full-lifecycle management of privileged accounts. It helps enterprises systematically mitigate security risks arising from out-of-control privileged accounts.Equipped with automated discovery, centralized management, dynamic password rotation, granular permission control, session monitoring and auditing capabilities, the system effectively addresses security vulnerabilities such as scattered privileged accounts, widespread weak passwords and hard-coded credential leaks. It prevents attackers from carrying out lateral movement and data theft using privileged credentials.

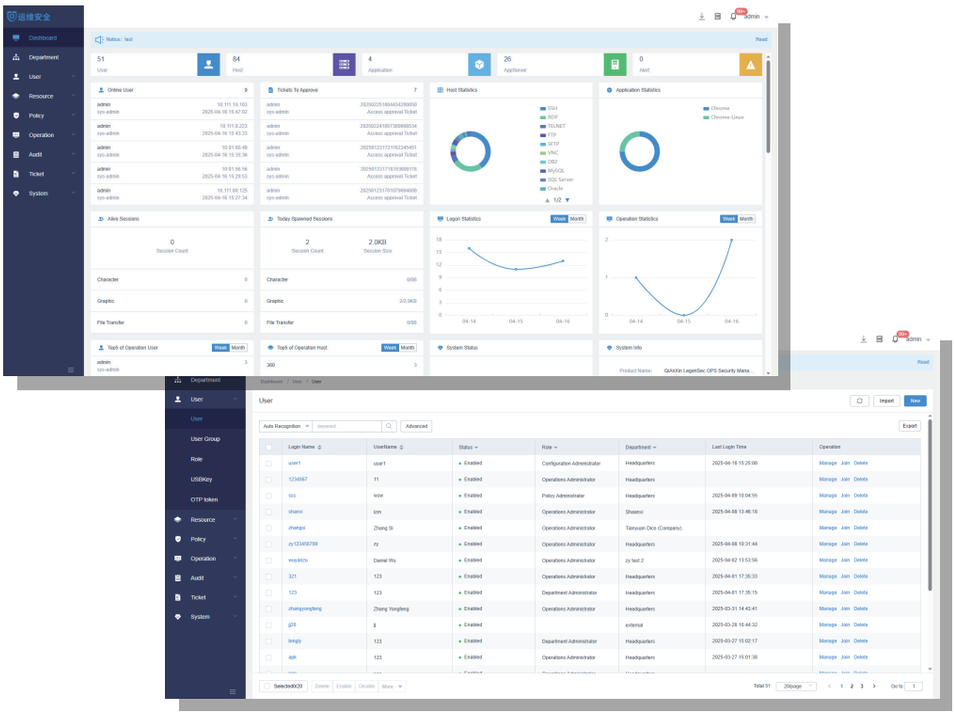

Scope of Application

Suitable for industries including government and public utilities, telecom operators, finance and enterprises.

Bastion System

An enterprise-grade centralized control and auditing product for data center operation and maintenance security. Based on an integrated 4A framework (Authentication, Authorization, Account Management, and Auditing), it enables unified management of network devices, databases, and host systems. The system effectively prevents risks such as unauthorized access and data leakage during operations.

Scope of Application

Applicable to government and public services, energy, finance, and enterprise industries.

Mobile Forensic Analysis System

A professional mobile smart device forensics tool that leverages advanced dynamic privilege escalation (ROOT/Jailbreak) technology to perform in-depth data extraction and analysis on iOS and Android devices. The system enables comprehensive data mining across the operating system layer, core service layer, media layer, and application layer, significantly improving the efficiency and accuracy of mobile forensics. It provides law enforcement and forensic work with an efficient and reliable solution.

Scope of Application

Applicable to public security, procuratorates, courts, judicial authorities, disciplinary inspection and supervision, and the military.

Computer Forensic Analysis System

A professional computer digital forensics solution composed of two core modules: a computer forensics analysis module and a computer simulation module. By working together, these modules ensure the integrity of the forensic process while providing intuitive system behavior analysis. The system offers law enforcement agencies and forensic professionals one-stop support for computer forensics, covering data extraction through to behavior reconstruction.

Scope of Application

Applicable to public security, procuratorates, courts, judicial authorities, disciplinary inspection and supervision, and the military.

Network Forensics System

A remote server forensics product specially developed for public security authorities. It enables comprehensive electronic data forensics and analysis on network servers. The system features core capabilities including dynamic data extraction, targeted file acquisition and storage device imaging. It also delivers advanced forensics functions such as intrusion trace analysis, security threat detection and system environment simulation. It can effectively meet investigation requirements of public security departments for remote devices including cloud servers and overseas servers.

Scope of Application

Suitable for public security, procuratorates, people's courts, judicial authorities, discipline inspection and supervision bodies, military and other departments.

Security Information and Event Management System

A specialized threat detection and response platform designed for enterprise-level security operation centers. It helps customers address challenges such as massive security alerts, complex attack strategies, and the shortage of advanced analysts. The system automatically provides intelligence-driven alert correlation, precise detection and early warning, and multi-dimensional threat investigation across endpoints, cloud, and more. Combined with AI-driven cognitive tracking mechanisms and expert-level managed security services (MSS), this system significantly enhances the efficiency of threat detection, analysis, and response.

Scope of Application

Applicable to government and public services, military, financial industry, and enterprises.

Network Detection and Response System

An advanced cybersecurity solution integrating threat detection, analysis, response and traceability. Designed for enterprises, government agencies and critical infrastructure operators, it identifies threats early, pinpoints attacks, delivers rapid response and conducts in-depth attacker tracing to achieve proactive defense.

Scope of Application

Suitable for industries including government and public utilities, finance, healthcare, and education & research.

Automated Penetration Testing System

An enterprise-grade automated security testing tool featuring three core functions: attack surface collection, vulnerability validation, and red team simulation. It helps customers proactively identify system risks, realistically assess defense capabilities, and improve penetration testing efficiency. Based on real-world offensive and defensive experience and intelligent algorithms, the system adapts to rapidly evolving IT environments, providing enterprises with continuous, efficient security validation and optimized defense support.

Scope of Application

Applicable to government and public services, defense industry, finance, and telecom operators.
